Portfolio

Professional Summary

AI-driven Fullstack Developer building and shipping SaaS products from scratch. Experience delivering production-ready systems in fast-paced environments with full end-to-end ownership. Strong background in Next.js, Supabase, modern frontend systems, and scalable backend architectures (Java Spring Boot / NestJS). Leverage AI tools (Claude, Gemini, OpenAI APIs) daily to accelerate development, debugging, architecture validation, and product iteration.

High-agency builder with founder mentality. Focused on shipping clean, scalable, production-grade software weekly.

AI-Driven Development Workflow

- Integrate AI tools (Claude Opus, Gemini Pro, OpenAI APIs) into daily development workflow.
- Use AI for rapid prototyping, refactoring, debugging, architectural validation and documentation.
- Accelerate feature delivery cycles while maintaining production-level code quality.
- Apply AI-assisted iteration to ship faster without compromising reliability.

Professional Experience

ARANNI BRANDS – Fullstack Developer (Freelance)

Remote — Oct 2025 – Present

- Build and ship ERP SaaS platform (PowipSystem) in a small, high-velocity team environment.
- Develop full-stack features end-to-end: database schema, backend APIs, and frontend UI.
- Backend services built using Java (Spring Boot) and Node.js (NestJS).
- Frontend developed using Next.js, TailwindCSS, Shadcn and modern component systems.
- Work with Supabase for database and backend services.
- Design modular microservices for Sales, Clients and Inventory domains.
- Implement authentication and authorization flows using JWT-based security.
- Integrate asynchronous messaging (RabbitMQ) for inter-service communication.
- Ship production-ready features on weekly cycles.
- Perform debugging, API validation, performance adjustments and production fixes.

OMTIME – Co-Founder — Backend Lead & Product Architect

Mendoza, Argentina — Dec 2024 – Present

- Designed and built multi-branch SaaS platform for appointment and accounting management from scratch.
- Architected backend using Java Spring Boot with clean separation of domain and infrastructure layers.
- Modeled database structure and business rules using UML and relational design principles.
- Implemented subscription logic and integrated Mercado Pago payment gateway.
- Developed dynamic appointment grid engine based on employee availability and service duration.
- Built frontend interfaces using Next.js, React, TypeScript and TailwindCSS.
- Owned full product lifecycle: architecture, implementation, debugging, iteration and deployment planning.
- Applied founder mindset: technical decisions aligned with product scalability and monetization.

Technical Stack

Frontend: Next.js, React, TypeScript, TailwindCSS, Component-based UI systems

Backend: Java (Spring Boot, Spring Security), Node.js (NestJS), RESTful API design

Databases: Supabase (PostgreSQL), MySQL, MongoDB

Architecture: Microservices, Clean Architecture, Domain-Driven Design, API Gateway, Modular Design

AI Integration: OpenAI APIs, Anthropic (Claude), AI-assisted development workflows

Infrastructure & Tools: Docker, Git/GitHub, RabbitMQ, Postman, Swagger

Education

Universidad Tecnológica Nacional (UTN – FRM)
Tecnicatura Universitaria en Programación – 2024

Languages

Spanish – Native
English – Professional working proficiency
Italian – Intermediate
